

Let's talk about Fats, Oils, and Grease (FOG)

NEVER pour grease down the drain. Here's why:

- It clogs your sewer line, resulting in an expensive visit from the plumber.
- It clogs city sewer lines and makes it harder to treat wastewater. The cost of cleaning and repairs leads to higher sewer rates for you.
- It causes sewer pack-ups which are hazardous to your health and harmful to the environment.

Cool it, Can it, Trash it!

Help fight the grease menace!

Grease is a menace to your sewer line.

Putting grease down the drain can eventually mean clogs for you, potential backups, and sewage overflows in the sanitary sewer system. So please do your part by disposing fats, oils, and grease the proper way.
